

This project is in two parts, both pretty simple. The objective is to familiarize yourself with Android Studio at a very elementary level.

- 1) Write an app that displays "I like Android".
- 2) Write an app that only runs in horizontal orientation and that displays "This is fun!" in the top left corner of the screen with no margin either from the top or the left.

Name the two projects something appropriate but not Assignment1 or similar.

Use the following documentation box ***at the top of every .java class*** you write for this class. Of course, fill it in with your own information. (Further reference may be found in the document named *322 & 522 Android Coding and Documentation Guidelines* found under Blackboard menu item *Course Documents*.)

```

/*****
 *
 *  CSCI 322/522           Assignment 1           current semester  *
 *
 *      App Name: Put the name of your project here                *
 *
 *      Class Name: Put the name of the .java file here            *
 *
 *      Developer(s): Your name goes here                          *
 *
 *      Due Date: Date assignment is due goes here                 *
 *
 *      Purpose: Write a short description of what this .java class *
 *                does or what its purpose is.                      *

```

What to Turn In

Document any Java classes as described in *322 & 522 Android Coding and Documentation Guidelines* and zip any apps separately.

Attach your zipped file(s) to your assignment submission on Blackboard.
